

## SURGICAL COSMETIC PROCEDURES BY SPECIALTY

This table outlines the RCPSC<sup>1</sup> specialty residency programs which provide formal, structured training in specific surgical cosmetic procedures. If a physician plans to perform a surgical cosmetic procedure (listed in the first column), then s/he must have the training and specialty certification in a corresponding specialty (see checkmarks). Otherwise, the College expects the physician, in general, to comply with the training requirements set out in the “Expectations of Physicians who have Changed, or Plan to Change their Scope of Practice to Include Surgical Cosmetic Procedures” – changing scope of practice process document. This table serves as a *guideline* only.

The far right column identifies specialties that *may* provide supplemental training in the given procedure either during the residency or in a subsequent formal fellowship. In these instances, the CPSO would need to review details of the specific training. For example, a dermatologist who wants to perform Blepharoplasty would need to contact the College to verify whether his or her residency or fellowship training is sufficient to perform this procedure. *The content and duration of any additional training expected by the CPSO will vary according to the physician’s situation (training and/or experience), which would be assessed on an individual basis. This table will be reviewed and updated periodically in order to reflect advances in surgical cosmetic procedures, as well as to address evolutionary changes to residency and fellowship programs.*

SURGICAL COSMETIC PROCEDURE		RCPSC Residency Training and Specialty Certification				Specialties that <i>may</i> provide Supplemental Training in the given procedure (CPSO to verify details of training)
		Otolaryngology- Head & Neck Surgery	Dermatology	Ophthalmology	Plastic Surgery	
1.	Abdominoplasty/Tummy Tuck				✓	
2.	Belly Button Surgery/Umbilicoplasty				✓	General Surgery
3.	Blepharoplasty/Eyelid Surgery	✓		✓	✓	Dermatology
4.	Brachioplasty (Arm Lift)				✓	
5.	Breast implant/Augmentation				✓	
6.	Breast Lift/Mastopexy				✓	
7.	Breast Reduction (Female)				✓	
8.	Breast Reduction (Male)				✓	
9.	Browlift/Endoscopic Browlift/Forehead Lift	✓		✓ <sup>2</sup>	✓	<ul style="list-style-type: none"> <li>• Ophthalmology</li> <li>• Dermatology</li> </ul>
10.	Buttock Implant				✓	

<sup>1</sup> The Royal College of Physicians and Surgeons of Canada (RCPSC) is the national professional association that oversees the medical education of specialists in Canada. The Royal College is dedicated to setting the highest standards in postgraduate medical education — through national certification examinations and lifelong learning programs — and to promoting sound health policy.

<sup>2</sup> Ophthalmology residents are able to perform *direct* browlifts after residency training.

41.	Suture Face Lift/Thread Lift	✓	✓ <sup>3</sup>		✓	Ophthalmology
42.	Thigh Lift/Thighplasty				✓	
43.	Vaginoplasty					<ul style="list-style-type: none"> <li>• Obstetrics and Gynecology</li> <li>• Plastic Surgery</li> </ul>

**End Notes: (i) to (viii)** - Physicians without a surgical background and/or those whose specialties are not trained in these procedures are not required to have one year of core surgery training in order to perform the following procedures: Deep Chemical Peels, Dermabrasion, EVLT (veins), Injections of substances for the purpose of causing lysis of fat or altering body contour, Hair Restoration Surgery, Ablative Laser Skin Resurfacing, Lip Implant, and Scalp Surgery – Reduction. They may, however, be required to complete the remainder of the training outlined in the Framework document. Each situation would be assessed on an *individual basis*.

<sup>3</sup> Dermatology – New devices are coming on the market, which simplifies the performance of this procedure; dermatologists will be able to perform this procedure using these new devices.
